

The Electrolog is the medium for all your cataloguing needs...

Powered by Bluehook Technology, in partnership with and developed by Autocosmosbiz, the new Electrolog platform is at the forefront of latest software technologies.

Almost all cataloguing mediums are covered in a unique basket of services allowing for convenient and easy catalogue generation and publication. Customised ERP integration is possible and has already been implemented on various sites.

- Looking for an all-round cataloguing solution?
- Tired of having to compile catalogues over and over from scratch?
- Why take your most skilled and experienced staff out of their day to day tasks to compile catalogues?
- Compiling catalogues costs thousands of hours in labour and heaps of unnecessary stress. Why go through it all, when all you need is the Electrolog?

The Electrolog offers cost effective and professional cataloguing at your fingertips, whenever you need it.

The Electrolog, a World of Information at Your Fingertips...

The Electrolog as a cataloguing medium allows for detailed and comprehensive display of all information relative to an item. It is extremely easy to use and find product.

Various search engines can be used by the user to find an item in the Electrolog depending on what information is available at the time.

You can find an item by vehicle, engine, any number, measurements, specs, category, etc.

If it's in the Electrolog, you **WILL** find it...

Electrolog for Aftermarket Suppliers and Manufacturers:

The Electrolog is a **subscription based** catalogue with over **900 users** in South Africa, Namibia, Botswana, and Zimbabwe.

Advertise your company and profile in the Electrolog and **display your numbers** in each item (see fig 1.1).

Being an advertiser and having your information housed in the Electrolog opens you to a world of **Cataloguing Services** available from Autocosmosbiz.

Namely:

Personalised/Company branded CD, DVD and on-line catalogues as well as hardcopy book and wall chart catalogues.

Wall charts with detailed information on products in an A1 portrait or landscape format.

Includes vehicle app listing on the back of the chart.

For positive product identification, great form of advertising and creating brand awareness...

Electrolog for Aftermarket Suppliers and Manufacturers:

All the above Cataloguing solutions (soft- and hard-copy) are available as standard generic products. These can, however, also be customised to suit a client's specific needs if so required.

If a supplier or manufacturer's information is already comprehensively represented in the Electrolog, the turn around time on delivering a complete standard generic catalogue in any of the above forms is literally as little 7 days. Customised development needed to a client's specific needs will require modifications to the platform and therefore relative development time to deliver a solution.

Customised development can be in the form of user interface changes (navigation, look and feel), ERP integration, data and database requirement changes and the like. These changes would be at an additional cost to the client and quoted on before the project commences.

Over 10 years in the cataloguing industry and with an already successful product in the market, we have the experience to handle just about any cataloguing challenges.

Cataloguing is what we do, AND WELL... ***Delivered from a vision, driven by passion.***
